

Beat-wise Serviceability

Aligning each seller's delivery areas with the distributor's real, day-by-day beat schedule — so buyers get delivery promises they can trust.

M T W T F S

! The gap today

- A seller/company can upload only **one** serviceability polygon.
- The entire coverage area is treated as a **single delivery zone**.
- The buyer app assumes delivery is available **every day**.
- Actual beat-wise delivery days are tracked **manually**, outside the system.
- No visibility of which area is served on which day.

! **Buyers order on days delivery isn't actually scheduled for their location — driving failed and delayed orders.**

Reality: this area is visited only 1–2 days a week

◆ The beat-wise model

Multiple delivery **beats** per company — each beat is one GeoJSON polygon mapped to the day(s) it's served.

Multiple beats
per company

One polygon
per beat

Delivery day
assigned to each

Buyer GPS location → the beat polygon it falls inside → the applicable delivery day.

EXAMPLE · ITC DISTRIBUTOR — ONE AREA PER DAY

Monday	→	KPHB polygon
Tuesday	→	Jubilee Hills polygon
Wednesday	→	Begumpet polygon
Thursday	→	Madhapur polygon
Friday	→	Kondapur polygon

+ Creating & managing beats

- 1 **Search & select the company** — quick lookup, no long lists.
- 2 **Enter a beat name** — e.g. KPHB 1, unique per company.
- 3 **Pick delivery day(s)** — one or more weekdays (Mon–Sat).
- 4 **Upload the GeoJSON polygon** — the beat's delivery zone.
- 5 **Save, then repeat** — add as many beats as needed.

MANAGE ANYTIME

- + Add
-  Edit
- ↓ Download polygon
- ⇌ Replace polygon
-  Delete beat / company
- ↕ Expand / collapse

! Rules & validations to know

-  **Polygon mandatory** — valid GeoJSON, max 5 MB.
-  **Unique beat name** per company.
-  **Same area → same days** across companies.
-  **No conflicting overlaps** on different days.
-  **Company locked** on edit — make a new beat.
-  **Delete confirms** · Sundays excluded (Mon–Sat).

Historical orders are safe. Serviceability is snapshotted at order-creation time — editing or deleting beats never changes past orders.

What buyers will see

Smarter listing

Sellers ranked by availability: tomorrow → earliest beat day → A–Z.

Delivery info

“Delivery by” + beat day shown on listings (informational).

Cart choice

Tomorrow ↔ Beat delivery — MOV & date update to match.

Checkout guard

Re-validates option, MOV & serviceability before placing.

Business

- Matches real operations
- City-wise expansion
- Less manual work

Operations

- Easier upkeep
- Independent beats
- Faster corrections

Buyers

- Accurate promises
- Better prioritisation
- Fewer failed orders

Platform

- Scalable model
- Multi-city ready
- Logistics foundation
